

FOOTMOTIONFOREFOOT.

STAND-ALONE
SCREWS

FOOTMOTION

Indication for use: The implants of the Foot and Hand Motion range are intended for the fixation of bone fractures and osteotomies and for arthrodeses of foot and hand in adults.

Contra-indication:

- Pregnancy.
- Acute or chronic local or systemic infections.
- Allergy to one of the materials used or sensitivity to foreign bodies.

A COMPREHENSIVE RANGE OF SOLUTIONS FOR FOREFOOT

SAFETY TRACEABILITY

The whole range is available sterile and non-sterile.

In order to improve the traceability of non-sterile screws, a marker (provided with each screw, except snap-off screw) clearly indicates their batch number and length.

Material: Titanium Alloy

Material: Stainless steel 316L

TECHNICAL FEATURES

→ SELF-DRILLING SCREWS

The shape of the distal tip of the screws allows self-drilling properties.

→ SELF-TAPPING SCREWS

The tip and the head of the screws have been designed with self-tapping shape allowing an insertion of the screw without any need of pre-tapping step.

→ CANNULATED SCREWS

The Ø2.25 mm and Ø2.6/3.0 mm cannulated screws are guided by Ø0.8 mm and Ø1.0 mm pins respectively. This allows the use of the drill bit, 3 in 1 instrument and the screw insertion through the pin.

→ NON-CANNULATED SCREWS

2 types of non-cannulated screws:

- For Weil osteotomies with Weil screws Ø2.0 mm
- For Chevron osteotomies with Chevron screws Ø2.8 mm.

→ SELF-COMPRESSIVE SCREWS

The difference of the pitch thread between the head and the distal part of the screw will lead to faster insertion on the distal fragment than on the proximal one and thus creates compressive effect.

→ WEIL SNAP-OFF SCREWS

The screw separates itself from the shank as soon as the head gets in contact with the bone and is compatible with wire driver (Ø2.4 mm).

FOOTMOTION

PATENTED DESIGNED INSTRUMENTS

→ 3-IN-1 INSTRUMENTS Ø2.25 mm, Ø2.6 mm and Ø3.0 mm

The 3-in-1 instrument:

- combines three tools: screwdriver, countersink and depth gauge. Each tool is also available separately,
- is available for each screw diameter,
- is available with connection to the power tool.

a) Depth gauge

b) Countersink

c) Screwdriver

PERCUTANEOUS REAMERS

Ø2.0 mm/Ø2.2 mm SHANNON REAMERS (straight or helical flute)

ANC599 (Ø2 mm - L8 mm)

ANC537 (Ø2 mm - L12 mm)

ANC198 (Ø2.2 mm - L12 mm)

ANC476 (Ø2 mm - L20 mm)

ANC538 (Ø2.2 mm - L20 mm)

Ø3.0 mm SHANNON REAMERS (straight or helical flute)

ANC203 (Ø3 mm - L13 mm)

ANC661 (Ø3 mm - L21 mm)

ANC842 (Ø3 mm - L30 mm)

ANC843 (Ø3 mm - L30 mm)

Ø4.0 mm SHANNON REAMER (helical flute)

ANC197 (Ø4 mm - L16 mm)

APPLICATIONS

Percutaneous reamers are designed for minimally invasive surgery of the forefoot.

→ Cylindrical reamers

- Ø4.0 mm large and Ø3.0 mm long Shannon reamers: exostosectomy, arthrodesis and shortening osteotomy.

- Ø2.0 mm/Ø2.2 mm short and long Shannon reamers: lateral rays osteotomy, distal or proximal osteotomy of the first ray and osteotomy of the first phalanx.

→ Conical reamers

- Wedge: distal monocortical osteotomy of the first ray and osteotomy of the first phalanx.

WEDGE CONICAL REAMER

ANC199 (Ø4 mm - L12 mm)

STAPLES

Two designs are available (straight: 90° and oblique: 26°) with, for each one, two widths (8 and 10 mm).

HALLUX VALGUS SURGICAL TECHNIQUE

STEP 1

FIRST METATARSAL OSTEOTOMY (M1)

Hallux Valgus

A. Exostosectomy

Using an oscillating saw or a percutaneous reamer, perform metatarsal head resection to create a smooth surface.

B. Chevron Osteotomy ('V-shaped' osteotomy)

1. The first cut is performed distally, dorsally and transversally under visual control, just behind the articular surface, and perpendicularly to the axis of the second metatarsal. The osteotomy depth should be about 5 mm.

2. The second cut is performed toward the plantar diaphysis.

C. Translation of bone fragment

Displace the distal fragment laterally to correct alignment. Temporary pin fixation can help maintaining the correct alignment.

D. Positioning the guide pin

Using the appropriate guide, insert the pin corresponding to the chosen screw diameter (Ø0.8 mm pin for Ø2.25 mm screws / Ø1.0 mm pin for Ø2.6 mm and Ø3.0 mm screws – the colour code of the pin holders helps to clearly identify the suitable pin size).

E. Determining screw length

Choose the 3-in-1 instrument (measuring device, countersink and screwdriver*) corresponding to the screw diameter** and insert it manually into the guide pin until it touches the bone. Read the screw length on the measuring gauge at the tip of the pin.

*Each tool is available separately and used with the quick-coupling handle, no power tool is necessary.

**Each instrument is marked with a silicone colour ring matching the colour code of the used screw.

F. Manual preparation of the first cortical surface

Prepare the first cortical surface using the countersink tip of the 3-in-1 instrument, so that the screw head can be safely inserted and flush with the cortex.

NB: The preparation of the cortex is critical in order to get an optimized compression.

G. Inserting the screw

The self-drilling property of the screw allows its direct insertion without a pre-drilling using the screwdriver tip of the 3-in-1 instrument*. Finalize the screw insertion manually and check if the screw head is totally inserted. Remove the pin and excise the medial eminence of the dorsal fragment (cf a. in the picture above).

*In case of a hard cortical bone it is recommended to drill before the screw insertion.

INTERMEDIATE RESULT

HALLUX VALGUS SURGICAL TECHNIQUE

STEP 2

PHALANGEAL OSTEOTOMY (P1)

H. Varus osteotomy

The Akin osteotomy of P1 is performed using a percutaneous reamer following the habits of the surgeon.

I. Determining screw length

Stabilize the varus osteotomy with the pin corresponding to the chosen screw diameter. Insert it until lightly touching the second cortical surface. Choose the suitable 3-in-1 instrument to measure the screw length (cf. E).

J. Manual preparation of the first cortical surface

Prepare the first cortical surface using the countersink tip of the 3-in-1 instrument, so that the screw head can be safely inserted and flush with the cortex.

K. Inserting the screw

Insert the screw* of the appropriate length, using the screwdriver tip of the 3-in-1 instrument. Finalize the screw insertion manually and check if the screw head is totally inserted. Remove the pin.

**In case of a hard cortical bone or a bicortical fixation it is recommended to drill before the screw insertion.*

FINAL RESULT

WEIL OSTEOTOMY SURGICAL TECHNIQUE

Weil osteotomy surgical technique with a snap-off screw (WST2.0Lxx)

1. Perform a first horizontal cut using the oscillating saw starting at the junction of the dorsal cartilage (1).

Then perform the second parallel dorsal cut with the first cut and then remove the bone fragment (2).

2. The reduction is made manually by flexing the toe.

3. Insert the screw with the power tool. As soon as the compression is finished, the screw snaps off.

NB: In case of a hard cortical bone it is recommended to prepare the screw insertion using a Ø1.0 mm pin (33.0210.080).

Caution: In osteoporotic bone, it may be necessary to provoke release of the shank prior screw head reaches the cortical bone to avoid excessive screwing. Then, use the screwdriver to realize the compression.

FINAL RESULT

INSTRUMENTS REFERENCES

FOOTMOTION INSTRUMENTATION*

Ref.	Screw colour	Description
ANC104	●	1.5 mm quick coupling hexagonal prehensor screwdriver - cannula Ø0.9 mm
ANC105	●	Ø0.8 mm pin guide
ANC106	●	Ø1.7 mm quick coupling drill bit - cannula Ø0.9 mm
ANC108		Length gauge for pin Ø1.0 mm - L150 mm
ANC125	● ●	Ø1.0 mm pin guide
ANC135		Ø2.0 mm quick coupling drill bit - cannula Ø1.1 mm
ANC137	●	Ø2.2 mm quick coupling drill bit - cannula Ø1.1 mm
ANC139	●	2.0 mm quick coupling hexagonal prehensor screwdriver - cannula Ø1.1 mm
ANC140	●	Ø1.7 mm countersink - cannula Ø0.9 mm
ANC141	●	Ø2.0 mm countersink - cannula Ø1.1 mm
ANC142	●	Ø2.2 mm countersink - cannula Ø1.1 mm
ANC145	●	Spatula for Weil screws
ANC148	●	1.8 mm quick coupling hexagonal prehensor screwdriver - cannula Ø1.1 mm
ANC161	●	1.5 mm quick coupling hexagonal screwdriver for Weil screws
ANC166	●	Pins support for Ø0.8 mm pin
ANC167	● ●	Pins support for Ø1.0 mm pin
ANC200	●	Pre-tapering countersink for Weil screws
ANC201	●	1.8 mm quick coupling hexagonal prehensor screwdriver for Chevron screws
ANC202	●	Pre-tapering countersink for Chevron screws
ANC350		Ø4.5 mm AO quick coupling handle - Size 1
ANC699	●	3 in 1 instrument for Ø2.25 mm screws
ANC700	●	3 in 1 instrument for Ø2.6 mm screws
ANC701	●	3 in 1 instrument for Ø3.0 mm screws
ANC770		Screwdriver for Ø2.0 mm Snap-off screws
33.0208.080	●	Pin Ø0.8 L80 mm
33.0210.080	● ●	Pin Ø1.0 L80 mm

OPTIONAL INSTRUMENTS

Ref.	Screw colour	Description
ANC144	● ● ●	16 cm forceps
ANC177		Holder Staple 90°
ANC178		Holder Staple 26°
ANC220	●	Chevron cutting guide - right side
ANC221	●	Chevron cutting guide - left side
14.33.53		Impactor Staple 90°
14.33.54		Impactor Staple 26°

* Custom-made kits including only instruments designed for the desired screw diameters can be ordered (see opposite summary table of instruments corresponding to each diameter).

- Instruments for Ø2.25 mm cannulated screws
- Instruments for Ø2.6 mm cannulated screws
- Instruments for Ø3.0 mm cannulated screws
- Instruments for Ø2.0 mm Weil screws
- Instruments for Ø2.8 mm Chevron screws

KIT DESCRIPTION

PERCUTANEOUS REAMERS*

Ref.	Description
ANC197	Ø4 mm large Shannon reamer - Helical flute L16 mm
ANC198	Ø2.2 mm short Shannon reamer - Helical flute L12 mm
ANC199	Ø4 mm wedge reamer - Flute L12 mm
ANC203	Ø3 mm wedge reamer - Flute L13 mm
ANC476	Ø2.0 mm long Shannon reamer - Helical flute L20 mm
ANC537	Ø2.0 mm short Shannon Isham reamer - Straight flute L12 mm

PERCUTANEOUS REAMERS*

Ref.	Description
ANC538	Ø2.2 mm long Shannon Isham reamer - Straight flute L20 mm
ANC599	Ø2.0 mm ultra short Shannon reamer - Helical flute L8 mm
ANC661	Ø3.0 mm long Shannon reamer - Helical flute L21 mm
ANC842	Ø3.0 mm long Shannon reamer - Helical flute L30 mm
ANC843	Ø3.0 mm long Shannon Isham reamer - Straight flute L30 mm

* The percutaneous reamers are only available on demand.
They are supplied in a sterile single use package.
